Unrolling a Recurrence

Remington Greko, Tyler Gutowski, and Spencer Hirsch

February 28, 2023

Work with your team to write a report about the *Master Theorem* for solving a recurrence.

I've usually avoided the *Master Theorem* because it has too many rules and does not offer real insight to the solution of the recurrene. However, I do include it in my handouts and the *Master Therorem* may be useful for find the solution to *Strassen's matrix multiplication recurrence.*

$$T(n) = 7T(n/2) + O(n^2)$$

There are many details beneath this recurrecne. I strongly encourage you to read what is in the Corman textbook and other sources.

Submit the team's report on Canvas. Include a task matric indicating who did what.
